USER STORY :

As a recycling operations manager, I want to manage material collections, customer details, service schedules, and payments efficiently using a CRM application.
The system should automate collection confirmations, service scheduling, notifications, and reporting for better management and customer satisfaction.

---

1. INTRODUCTION :

1.1 Project Overview :

The RePlastix Innovations CRM is an application designed to manage plastic material collections, customer data, service schedules, and payments.
The system automates workflows, improves operational efficiency, and enhances customer experience in the recycling and waste management sector.

1.2 Purpose :

- **Automate plastic material collection requests**
- **Manage customer and supplier details efficiently**
- **Track collection and processing schedules**
- **Generate reports and dashboards for operational insights**
- **Send automated notifications to customers and staff**

---

2. IDEATION PHASE :

2.1 Problem Statement :

Manual collection and recycling management leads to errors, scheduling conflicts, poor customer communication, and inefficient tracking of materials.

The RePlastix Innovations CRM solves these issues by automating collection scheduling, tracking, and communication.

2.2 Target Users :

- **Recycling Operations Manager**
- **Collection Coordinators**
- **Admin Users**
- **Customers/Suppliers**

---

3. REQUIREMENT ANALYSIS :

3.1 Functional Requirements :

- **Material Collection Management**
- **Service and Processing Scheduling**
- **Customer/Supplier Management**
- **Payment Tracking**
- **Email/SMS Notifications**
- **Report Generation**
- **Dashboard Analytics**

3.2 Non-Functional Requirements :

- **Security**
- **Scalability**
- **Performance**
- **Reliability**
- **Availability**

---

4. PROJECT DESIGN :

4.1 Custom Objects :

- **Collection Request**
- **Service Details (processing or pickup schedules)**

- **Customer/Supplier**
- **Payment**
- **Material Inventory**

4.2 Automation :

- **Flow Automation (Collection confirmations, service reminders)**
- **Apex Classes**
- **Triggers**

---

5. PROJECT DEVELOPMENT :

Milestones:

1. **CRM Setup**
2. **Object Creation**
3. **Field Creation**
4. **Relationships Setup**
5. **Flow Creation**
6. **Apex Classes Development**
7. **Trigger Implementation**
8. **Reports Creation**
9. **Dashboard Setup**

---

6. APEX CLASSES :

- **CollectionConfirmationSender**
- **CollectionStatusUpdater**
- **PaymentUpdater**
- **ServiceReminderSender**
- **MaterialInventoryHelper**

---

7. TRIGGERS :

- **CollectionRequestTrigger**

---

8. REPORTS & DASHBOARDS :

- **Collection Report**
- **Service Schedule Report**
- **Payment Report**
- **Customer/Supplier Report**
- **Material Inventory Report**

---

9. TESTING :

- **Apex Test Classes Created**
- **Code Coverage Achieved**
- **Functional Testing Completed**

---

10. CONCLUSION:

The RePlastix Innovations CRM application improves plastic collection and service management, avoids scheduling conflicts, and enhances communication with customers and suppliers.
It ensures smooth operations, efficient tracking of recyclable materials, and better decision-making through automation and analytics.

---

11. FUTURE SCOPE:

- **Mobile App Integration for on-the-go collection management**
- **Online Payment Gateway Integration**
- **AI-based Material Sorting Recommendations**
- **SMS/WhatsApp Notifications for Customers and Staff**

- **Multi-Branch Recycling Facility Management**

---
